Signal after Rx

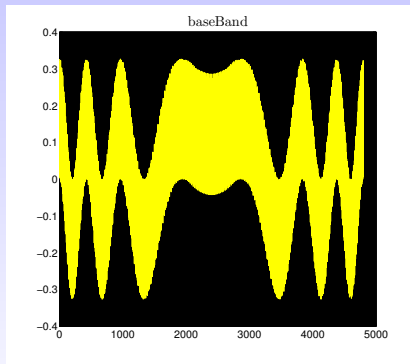

Sampling of signal

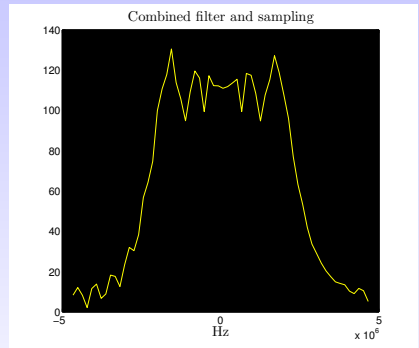

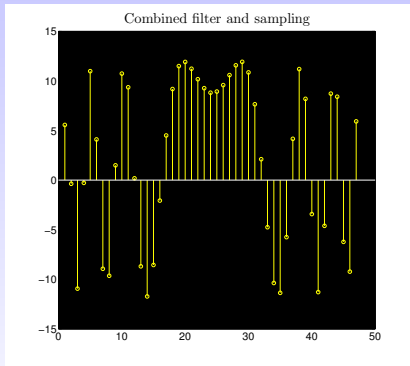

T_x

convert to baseband

 T_x 

LP filter and rangeinrate ("Fålltakt")

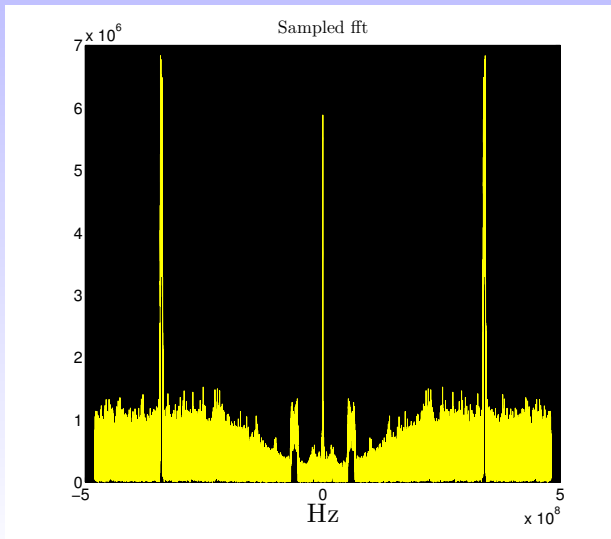

Rescaled

Sampled Rx

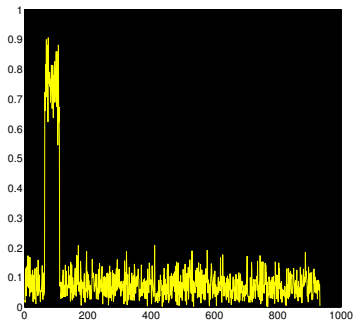

Sampled Rx high power input, cutoff

Correlation of signal

Abs

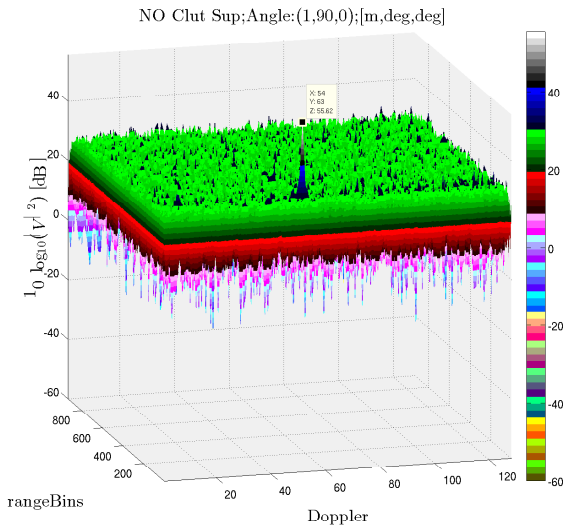

Correlation of signal

Real

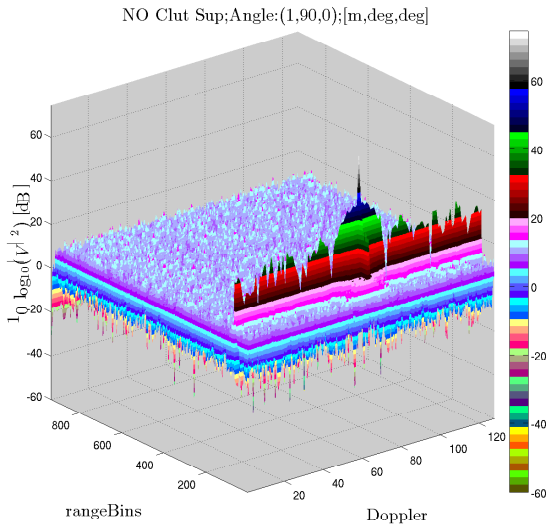

Doppler plot

$\sigma = 1\text{m}^2$, 100m/s, 128 pulse

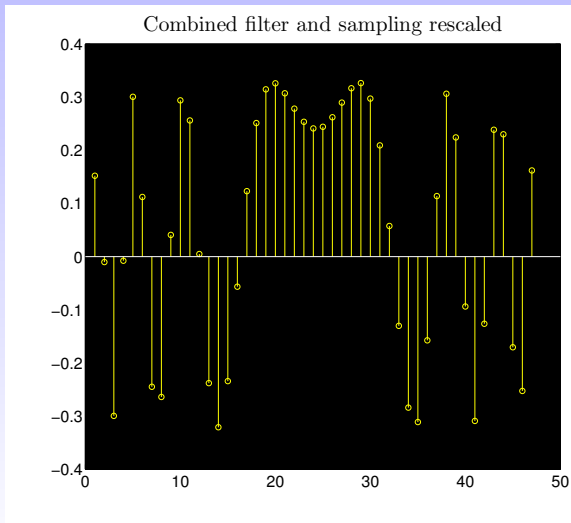

Doppler plot

$\sigma = 1\text{m}^2$, 100m/s, 128 pulse and clutter echo from target with $\sigma = 1e6\text{m}^2$

What's next?

- Check least detectable input power
- Different scenarios

First title
